Advanced Registration Mark System (ARMS) for all print & cut designs:

To get jobs started faster, ARMS will automatically search for the first mark without the extra step of locating it manually.

Versatile, flexible & durable for high production output:

Graphtec's selection of optional tools allows Cut, Plot or Pounce. Cuts material such as sandblast mask up to 50 mil thick with ease—add the optional two-pen configuration for plotting annotations.

Cutting Master 2—Adobe® Illustrator® & Corel Draw® Plug-in:

Design, print & cut layouts from popular design packages. Print & cut jobs are simple with Cutting Master 2 from creating registration marks to output to the cutter with high accuracy—plus the ability to orient, copy position and scale panel. Assign each line with cutting conditions. Great for pop-out decals.

Industry Leading Cutting Speed & Precision:

Fastest in its class with cutting speeds up to 58.5 ips. Tangential Control Mode outperforms even the mechanical tangential system in both speed and quality. Within milliseconds, the blade is lifted into position for the next cut line and angle—leaving clean, sharp corners. Useful feature for sandblast designs as well as intricate designs such as 1/16" vinyl lettering.

High Cutting Force without wearing down your cutter:

With a down force of 600 grams, it can cut the most difficult of media. The soft landing feature senses the thickness of the media. This increases through put as well as saves the life of the cutting head.

Design with convenience in mind without limitations:

Choice of front or rear load. Each design has the added throat space to handle wider material. The FC8000MK2-160 (64") can handle widths up to 72".
